SKILLS

Core

Angular · Vue.js/Nuxt · TypeScript ·
Node.js · Tailwind CSS · NgRx/Pinia ·
Jest · Playwright · Cypress · Vitest ·
Selenium

Proficient

React/Next.js · NestJS · Docker ·
Azure DevOps · GitHub Actions ·
SonarQube · JWT/OAuth2 ·
Microservices · PostgreSQL · Sentry ·
New Relic

Analytics

Google Tag Manager · Matomo · SEO

Familiar

C#/.NET · Python · Kubernetes ·
Redis · GraphQL · AWS · Azure ·
Prisma

Methodologies

Domain-Driven Design · Clean
Architecture · Scrum · Code Reviews ·
Mentoring

LANGUAGES

German – Native
English – Advanced (C1)

CERTIFICATIONS

OWASP Top 10 – Web Application
Security Fundamentals (2025)

Timo Achtelik

Lead Software Engineer

PROFILE

Full-Stack Lead Software Engineer with 7+ years of hands-on contribution in professional delivery teams across client projects in healthcare SaaS, e-commerce, and enterprise software modernization. Deep expertise in Angular, Vue.js/Nuxt, TypeScript, and Node.js with a strong focus on modern frontend architecture. Experienced in technical leadership, architectural collaboration with client-side software architects, cross-functional mentoring, and driving engineering quality across concurrent projects. Solid foundation in Domain-Driven Design, CI/CD automation, and legacy system transformation.

PROFESSIONAL EXPERIENCE

Lead Software Engineer

Mar 2026 – Present

BAYOOTECH GmbH, Darmstadt

- Lead BAYOOTECH's delivery team as primary technical point of contact on a long-term enterprise healthcare SaaS project, collaborating directly with client-side software architects to translate architectural direction into concrete engineering standards
- Act as technical bridge between client stakeholders and the internal development team, ensuring alignment between architectural vision and implementation
- Define and enforce code quality standards, conduct structured code reviews, and drive engineering best practices across the team
- Mentor a development team of 4–5 engineers through technical specifications, code reviews, and hands-on guidance
- Continue as active AI Ambassador, driving adoption of AI-assisted development tooling (Claude Code, GitHub Copilot) across engineering teams with Senior Engineers, Architects, and the CTO
- Support two additional client projects with growing technical responsibility

Senior Software Engineer

Mar 2024 – Mar 2026

BAYOOTECH GmbH, Darmstadt

- Core engineer on a multi-year healthcare SaaS platform: full-stack clinical workflow management application covering patient management, appointment scheduling, treatment planning, and clinical documentation
- Delivered frontend-focused full-stack features using Angular, Vue.js, and Node.js for enterprise clients across multiple industries
- Designed and optimized CI/CD pipelines and containerized deployment environments (Docker), improving release reliability and reducing manual deployment overhead
- Authored technical specifications, conducted systematic code reviews, and led quality assurance processes across multiple concurrent projects
- Coached junior and mid-level developers; collaborated with product owners and UX designers in Scrum environments
- Applied Domain-Driven Design principles to architectural modernization efforts, improving long-term maintainability and scalability
- Selected as AI Ambassador (Jan 2025) within a company-wide initiative – a cross-functional group of Senior Engineers, Architects, Leads, and the CTO

Junior Software Engineer

Oct 2023 – Mar 2024

BAYOOTECH GmbH, Darmstadt

- Developed high-quality frontend features using Nuxt.js (Vue.js) within agile development processes
- Contributed to architectural decisions and performance optimization of production applications
- Implemented automated testing pipelines (unit and integration tests); participated in CI/CD deployment processes
- Supported requirements analysis and effort estimation in cross-functional Scrum teams

Working Student Software Engineer

Feb 2017 – Oct 2023

BAYOONET AG, Darmstadt

- Embedded as a full team member in professional client delivery teams for 6+ years, writing production code throughout the full software lifecycle – independently owning features, sub-projects, and client deliverables from requirements through deployment
- Web-based driver scheduling and payment management system for a mobility service provider (ASP.NET/Razor) – primary project owner for 1.5 years
- Performance-optimized e-commerce product catalog with 10,000+ SKUs: server-side rendering, skeleton UI, infinite scroll (Next.js full-stack)
- Automated financial reporting tool with dynamic Excel exports and macro automation for sales and revenue analytics (ASP.NET)
- Led end-to-end Google Tag Manager integration and SEO optimization as sole responsible developer; independently migrated analytics infrastructure to Matomo on a second client project

EDUCATION

M.Sc. Software Engineering

2020 – 2023

Hochschule Darmstadt

Thesis: From Legacy to Innovation – Domain-Driven Transformation and Low-Code Development as Catalysts for System Modernization

B.Sc. Computer Science (Communication and Media)

2016 – 2020

Hochschule Darmstadt

Thesis: Concept and Evaluation of Migrating a Conventional CMS to a Headless CMS Architecture

Exchange Semester

2018

Concordia University of Edmonton, Canada

English-taught computer science coursework through HDA's international exchange program

Vocational Training – IT Specialist (Application Development)

2014 – 2016

Sage Software GmbH, Frankfurt

Developed application modules for Sage Office Online (AngularJS, HTML, CSS)

PROJECTS

Recipe Hub – Full-Stack Reference Project

recipe-hub.timo-achtelik.de · github.com/timoachtelik-dev/next-recipe-hub

- Full-stack web application built with Next.js: scalable frontend architecture, advanced search, responsive UI; clean architecture and modern React patterns
